The Challenge

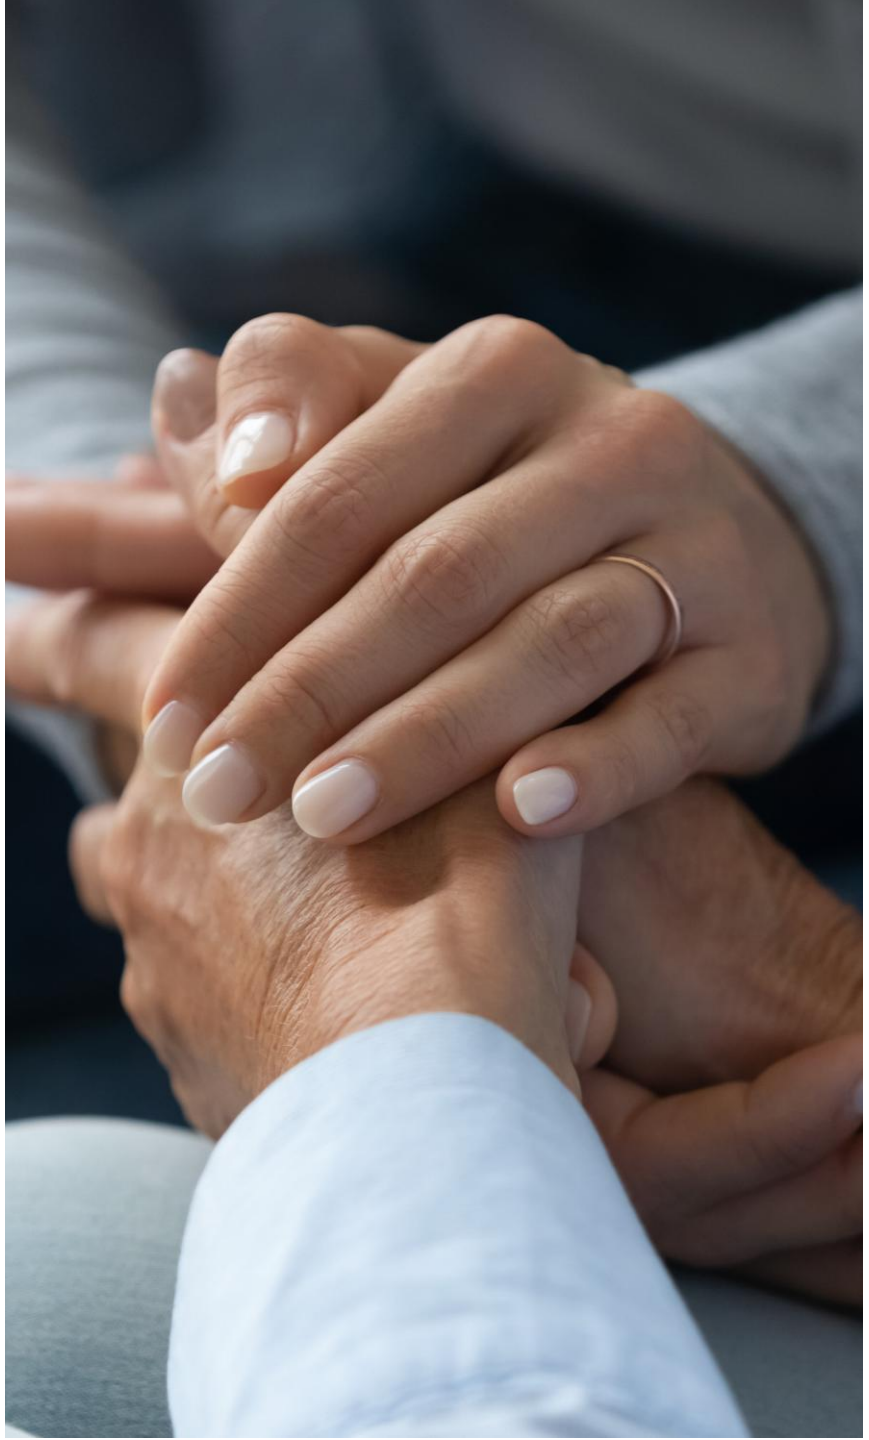

AI-Powered Financial Inclusion & Resilience

The Challenge: AI-Powered Financial Inclusion & Resilience

Your Challenge is to design and build an AI-driven solution that promotes financial fairness and social mobility by empowering individuals and families to better manage their money and build long-term financial resilience.

We want you to create ethical, transparent, and inclusive digital tools that:

- Help users understand, budget, and plan their finances in a personalised way that reflects their unique circumstances and challenges.
- Use predictive insights, historical data, and future trend forecasting—what we like to call “financial time travel”—to anticipate risks such as financial hardship or unexpected expenses before they happen.
- Provide proactive, tailored advice or support that enables users to take control of their financial futures with confidence and resilience.
- Focus on accessibility and inclusion, ensuring your solution works for underserved or vulnerable communities who often face the greatest barriers to fair financial services.
- Think of your solution as a trusted financial coach or agent powered by AI—one that makes complex financial decisions simpler and supports real-life outcomes, helping to close gaps in social mobility.

The Challenge: What are we looking for?

Customer Focus and User-Centric Design

- How well does the solution understand and address real customer needs and financial challenges?
- Is the solution personalised, accessible, and easy to use for a diverse range of customers, including underserved groups?

Innovation and Creativity

- How original and inventive is the solution?
- Does it introduce new ideas or apply AI in novel ways to promote financial inclusion and resilience?

Social Impact and Inclusivity

- Does the solution promote fairness and help improve social mobility for vulnerable or marginalised communities?
- Is the approach ethical, transparent, and socially responsible?

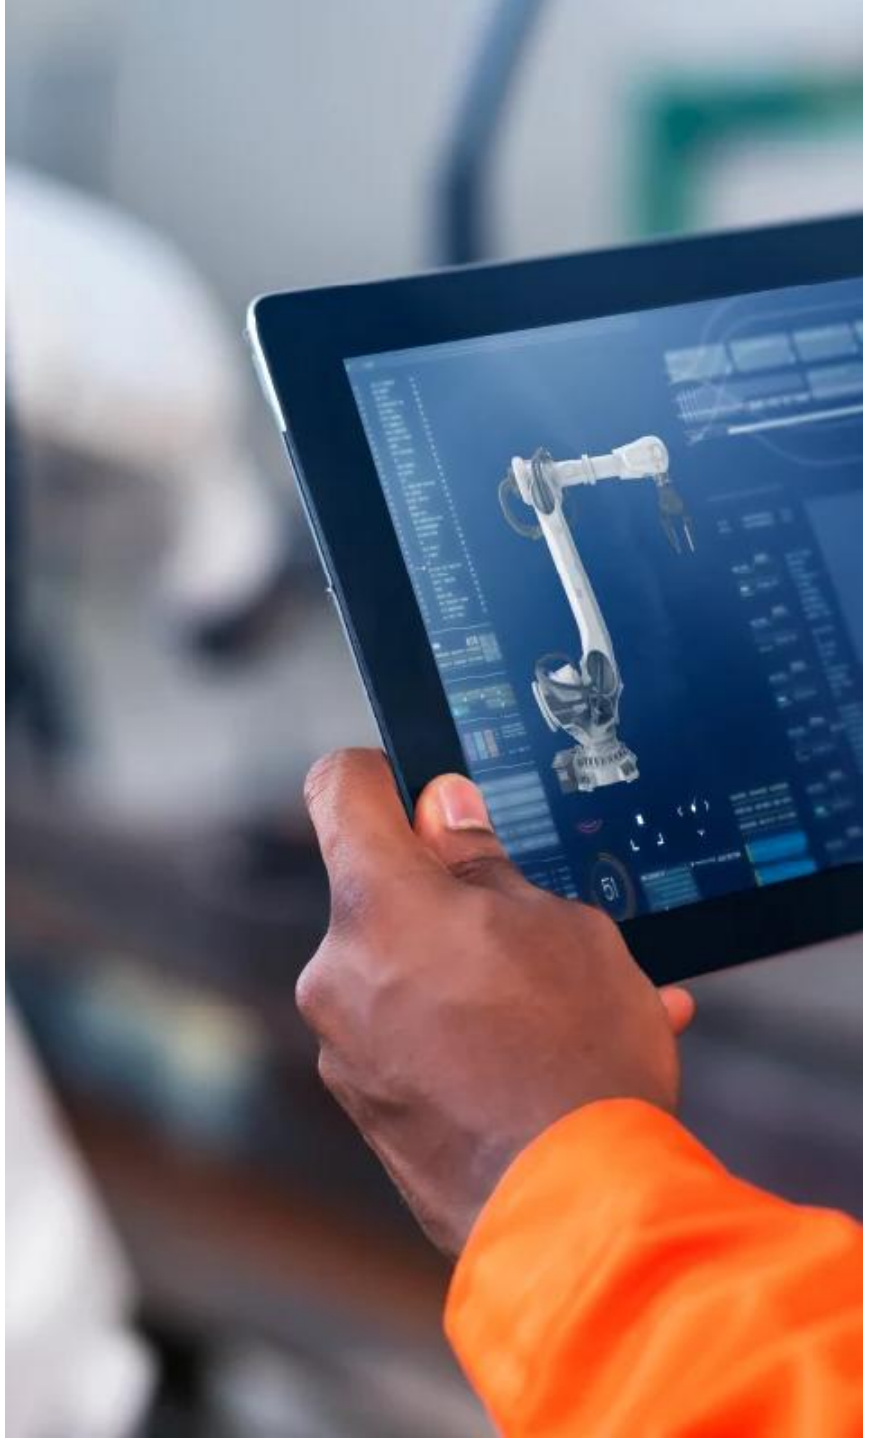

Use of AI and Data

- How effectively does the solution leverage AI technologies, including predictive insights and data forecasting ("financial time travel")?
- Is the AI use appropriate, responsible, and clearly adds value to the customer experience?

Feasibility and Practicality

- How realistic and implementable is the solution within the current or near-future financial ecosystem?
- Does the demo clearly communicate the core idea and its benefits from a customer perspective?
